

Resources for Construction and the Trades

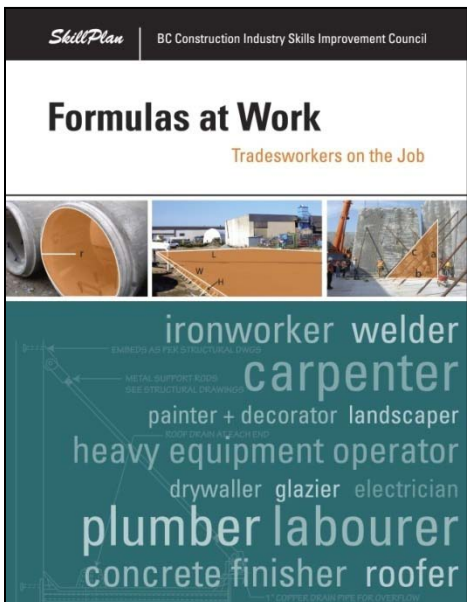

From the Ground Up

Format: Coil book, 126 pages
Price: \$34 / \$30.60*

Adults with an interest in construction will learn about trades careers and the language of Canadian construction sites in this resource. **From the Ground Up: Tradesworkers on the Job** provides opportunities to practice Essential Skills in a construction context.

The book is divided into three sections. The first section is about the construction of a tilt-up warehouse, and introduces the reader to the terminology used on a job site. The second section is an introduction to careers in the trades and features interviews with tradesworkers and information about their occupations. Essential Skills such as Document Use, Reading Text and Numeracy are the focus of the third section. A background in the trades is not required to complete trades-related tasks such as interpreting floor plans, reading specifications for wiring and calculating lengths of lumber.

Formulas at Work

Format: Coil book, 70 pages
Price: \$40 / \$36*

Formulas at Work: Tradesworkers on the Job is a companion resource that can be used to practice Numeracy skills using actual construction situations. This publication takes a unique approach by using a combination of photographs and diagrams to set up and solve math problems involving area, volume and right-angle triangles.

Posters, included with the resource, give steps to setting up and solving problems, and provide construction-related examples.

Formulas at Work and **From the Ground Up** are a valuable resource for those who want an introduction to construction while practicing Essential Skills.
